

CLAIMS

What is claimed is:

1 1. A method of managing authorization tokens within a computer
2 system comprising:
3 creating a master owner token indicating full ownership of a resource
4 within the computer system by a management environment;
5 creating at least one delegate owner token for a delegated environment;
6 communicating the delegate owner token to the delegated environment
7 and to the resource; and
8 allowing access to the resource by the delegated environment when the
9 delegated environment presents a valid delegate owner token to the resource.

10
1 2. The method of claim 1, further comprising storing the master owner
2 token in a secure storage within the computer system.

3
1 3. The method of claim 1, wherein the resource comprises a trusted
2 platform module.

3
1 4. The method of claim 1, wherein the management environment assigns
2 a delegate owner token to a delegated environment by sealing the delegate
3 owner token to the delegated environment.

4
1 5. The method of claim 1, wherein the master owner token indicates the
2 management environment can change at least one of the master owner token
3 and a delegate owner token.

4
1 6. The method of claim 1, further comprising launching the management
2 environment before launching the delegated environment.

1 7. The method of claim 1, further comprising storing the delegate owner
2 token in an access control list in the resource.

1 8. The method of claim 1, further comprising removing, by the
2 management environment, a delegate owner token from the access control list
3 and adding a different delegate owner token to the access control list.

1 9. An article comprising: a storage medium having a plurality of machine
2 readable instructions, wherein when the instructions are executed by a
3 processor, the instructions provide for managing authorization tokens within a
4 computer system by

5 creating a master owner token indicating full ownership of a resource
6 within the computer system by an administrative environment;

7 creating at least one delegate owner token for a environment;

8 communicating the delegate owner token to the environment and to the
9 resource; and

10 allowing access to the resource by the environment when the environment
11 presents a valid delegate owner token to the resource.

1 10. The article of claim 9, further comprising instructions for storing the
2 master owner token in a secure storage within the computer system.

1 11. The article of claim 9, wherein the resource comprises a trusted
2 platform module.

1 12. The article of claim 9, wherein the management environment assigns
2 a delegate owner token to a delegated environment by sealing the delegate
3 owner token to the delegated environment.

1 13. The article of claim 9, wherein the master owner token indicates the
2 management environment can change at least one of the master owner token
3 and a delegate owner token.
4

1 14. The article of claim 9, further comprising instructions for launching the
2 management environment before launching the environment.
3

1 15. The article of claim 9, further comprising instructions for storing the
2 delegate owner token in an access control list in the resource.
3

1 16. The article of claim 9, further comprising instructions for removing, by
2 the management environment, a delegate owner token from the access control
3 list and adding a different delegate owner token to the access control list.
4

1 17. A computer system comprising:
2 a plurality of environments;
3 a management environment to create a master owner token indicating full
4 ownership of a resource within the computer system, to create a plurality of
5 delegate owner tokens indicating partial ownership of the resource, and to
6 communicate a selected one of the delegate owner tokens to a selected one of
7 the plurality of environments and to the resource;

8 wherein the resource stores delegate owner tokens received from the
9 management environment and allows access to the resource by the selected
10 environment when a valid delegate owner token is presented to the resource by
11 the selected environment.
12

1 18. The computer system of claim 17, further comprising a secure
2 storage to store the master owner token.
3

1 19. The computer system of claim 17, wherein the resource comprises a
2 trusted platform module.

3

1 20. The computer system of claim 19, wherein the trusted platform
2 module comprises an access control list for storing the delegate owner tokens
3 received from the management environment.
